Deborah McDermott

Village Administrator

Bruce P. Kennedy

Village Clerk / Treasurer

Marianne Lennon

Village Justice

John P. Reali

Counsel

Brian S. Stolar, Esq.

Annual Storm Water Management Report 2017

In order for the Village to maintain its Municipal Separate Storm Sewer System Permit known as MS4 Permit there are six goals or minimum control measures the Village must work towards each year.

The minimum control measures include the following:

1. Public Education and Outreach
2. Public Involvement and Participation
3. Illicit Discharge Detection & Elimination
4. Construction Site Control
5. Post Construction Control
6. Municipal Operations

Public Education

- As the lead member of the HHPC we work closely on this MCM with HHPC
- Display at Mini Mart
- Cesspool Education to Contractors
- Boat Pump Out education

Public Participation

- Water Monitoring of Hempstead Harbor
- Beach Clean Ups
- Representation on the LI Sound Study Citizens Advisory Committee

Illicit Discharges

- All the outfalls from the Sea Cliff drainage area have been mapped on GIS
- Our Building Inspector does 2 annual dry weather inspections of these 10 outfalls to determine if there are any non-storm water discharges. *None found this year.*
- Other discharges investigated include:
 - Car washes
 - Landscapers
 - Swimming Pools
 - Malfunctioning Septic Systems

Construction Site Runoff

- Code requirements for construction sites over 1 Acre
- Including the requirement for a Storm water pollution prevention plan
- There were no sites over one acre this past year
- Building department does inspect sites under one acre and request prevention measures where appropriate.

Post Construction Storm water Control

- Includes requirements for finished developments to control normal storm water runoff by on site drainage methods
- Drywells
- Porous Driveways and patios
- Rain Gardens
- Rain Barrels

Municipal Operations

- Drainage basin cleaning
- Curb side bagged leaf pick up
- Street Sweeping
- Water Quality Control Units that separate solids, microbes and floatables prior to discharge to the harbor
- With the addition of the Water Quality Unit upstream of Scudders Pond the Village now has 4 such units.
